ASSIGNMENT 3

Textbook Assignment: "Fire protection systems" and "Water Treatment and Purification."

Pages 8-29 through 9-13.

- 3-1. You are maintaining a halon fire protection system. You should consult a person in what organization for a system conversion?
 - 1. NFPA
 - 2. EPA
 - 3. OSHA
 - 4. Engineering
- 3-2. Installation of a new halon 1301 system is prohibited without special approval from whom?
 - 1. NAVFACENGCOM
 - 2. EPA
 - 3. ROICC
 - 4. Base fire chief
- 3-3. The production of halons will be eliminated by the year 2000?
 - 1. True
 - 2. False
- 3-4. What length of time delay, in seconds, is built into a halon system actuator?
 - 1. 10 to 30
 - 2. 10 to 45
 - 3. 15 to 60
 - 4. 20 to 45
- 3-5. Regardless of the method being used, what device must be attached to the releasing mechanism?
 - 1. An auxiliary fan
 - 2. A control valve
 - 3. A light
 - 4. An alarm

INSPECTION AND TEST PERIODS

- A. Weekly
- B. Monthly
- C. Quarterly
- D. Semiannually
- E. Annually

Figure 3A

IN ANSWERING QUESTIONS 3-6 THROUGH 3-8, REFER TO FIGURE 3A.

- 3-6. Halon and carbon dioxide nozzles.
 - 1. A
 - 2. C
 - 3. D
 - 4. E
- 3-7. Weighing cylinders.
 - 1. A
 - 2. B
 - 3. C
 - 4. D
- 3-8. Leakage of devices and connections in a low-pressure carbon dioxide system.
 - 1. A
 - 2. B
 - 3. D
 - 4. E

- 3-9. You should perform a hydrostatic test on cylinders and hoses at what maximum time interval, in years?
 - 1. 5
 - 2. 7
 - 3. 8
 - 4. 12
- 3-10. At what maximum time interval should you replace the frangible disks on low-pressure storage tanks?
 - 1. 5 years
 - 2. 7 years
 - 3. 8 years
 - 4. 12 years
- 3-11. What type of system can be used with dry chemicals?
 - 1. Total flooding
 - 2. Local application
 - 3. Hose line
 - 4. Each of the above
- 3-12. What is the most widely used dry chemical?
 - 1. Nitrogen
 - 2. Sodium bicarbonate
 - 3. Monoammonium phosphate
 - 4. Potassium phosphate
- 3-13. Dry chemicals are used primarily on what type of fires?
 - 1. Flammable liquid
 - 2. Cellulose nitrate
 - 3. Dry wood
 - 4. Delicate electrical equipment
- 3-14. The term "saponification" refers to what reaction between a dry chemical and a fire source?
 - 1. Chemical neutralization
 - 2. Conversion of fatty grease to soap
 - 3. Electronic equipment reaction
 - 4. Heavy metal reaction
- 3-15. What type of gas is used as a propellent for a dry chemical system?
 - 1. Hydrogen
 - 2. Oxygen
 - 3. Nitrogen
 - 4. Carbon dioxide

- 3-16. Dry chemical distribution systems should be constructed of what schedule of steel pipe?
 - 1. 10
 - 2. 20
 - 3. 30
 - 4. 40
 - 3-17. What term, if any, is used to describe the special problem of inertia that must overcome in nozzle installation?
 - 1. Pressure drop
 - 2. Saponification
 - 3. Balancing
 - 4. None
 - 3-18. What term is used to describe a water source developed for military use?
 - 1. Water source
 - 2. Water point
 - 3. Water well
 - 4. Water outlet
 - 3-19. A total of how many gallons per minute are flowing in a stream that is 10 feet wide and has an average depth of 3 feet when the water is flowing at a velocity of 15 feet per minute?
 - 1. 960
 - 2. 1,920
 - 3. 2,880
 - 4. 3,350
 - 3-20. Compute the quantity of water in a lake that is 100 feet long, 20 feet wide, has an average depth of 6 feet, and no run off?
 - 1. 30,000 gallons
 - 2. 60,000 gallons
 - 3. 90,000 gallons
 - 4. 120,000 gallons

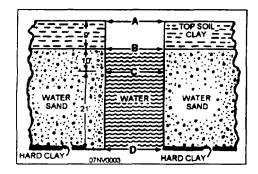

Figure 3B

IN ANSWERING QUESTIONS 3-21 THROUGH 3-23, REFER TO FIGURE 3B AND ASSUME THAT THE WATER STABILIZES AT POINT C AFTER CONTINUOUS PUMPING AT A CONSTANT RATE OF 50 GALLONS PER MINUTE.

- 3-21. The static level of the well is located at what point?
 - 1. A
 - 2. В
 - 3. C
 - 4. D
- 3-22. As measured from the ground surface, what is the dynamic water level of the well, in feet?
 - 1. 9
 - 2. 10
 - 3. 19
 - 4. 21
- 3-23. The amount of drawdown is equal to the distance between what points?
 - 1. A and B
 - 2. A and C
 - 3. B and C
 - 4. B and D
- 3-24. The yield of the well for a particular drawdown depends on which of the following factors?
 - 1. Permeability of the topsoil and clay
 - 2. Permeability of the water-bearing formation
 - 3. Width or diameter and depth of the well
 - 4. Depth from the surface to the static water level $% \left(1\right) =\left(1\right) \left(1\right) \left$

- 3-25. Which of the following types of sand provides the greatest rate of flow during drawdown?
 - 1. Fine sand with grains irregular in size
 - Fine sand with grains nearly uniform in size
 - 3. Coarse sand with grains irregular in size
 - Coarse sand with grains nearly uniform in size
- 3-26. When determining the hydraulic characteristics of a well, you should not consider which of the following data?
 - 1. Volume of water pumped per unit of time
 - 2. Percolation rate per unit of time
 - 3. Static water level before pumping
 - 4. Pumping level at a constant pumping rate
- 3-27. The pump and power unit used for testing a well should be capable of continuous operation for a minimum of how many hours?
 - 1. 24
 - 2. 48
 - 3. 72
 - 4. 96
- 3-28. What should be the maximum operating rate of a pump for testing the yield of a well?
 - 1. One that causes 50 percent of maximum possible drawdown
 - One that causes the maximum possible drawdown
 - 3. Approximately 50 gpm
 - 4. Approximately 100 gpm
- 3-29. The term "safe pumping yield" is defined as having what withdrawal rate?
 - A total of 50 percent of maximum drawdown without lowering the water table
 - A total of 75 percent of maximum drawdown without lowering the water table
 - 3. An amount that allows for total recovery in 30 minutes or less
 - An amount that allows for total recovery in 1 hour or less

- 3-30. Relative to the initial development of a well, a complete test report includes the initial static water level, pumping rates, drawdown data, rate of recovery, and what other information?
 - 1. Pump chart
 - 2. Well chart
 - 3. Bacteriological report
 - 4. Water analysis report
- 3-31. In a temperate zone, what is the daily water consumption, in gallons, for one person marching in formation?
 - 1. 1
 - 2. 2
 - 3. 1/2
 - 4. 1 1/2

IN ANSWERING QUESTIONS 3-32 THROUGH 3-33, CONSIDER A GROUP OF 40 MEN IN A TEMPERATE ZONE WHERE THE TERRAIN IS LEVEL. YOU ARE EQUIPPED WITH FOUR LARGE TRUCKS AND TWO JEEPS.

- 3-32. When field rations are being used under combat conditions, what daily minimum individual water requirement should you consider appropriate?
 - 1. 22 gallons
 - 2. 42 gallons
 - 3. 82 gallons
 - 4. 102 gallons
- 3-33. Under peaceful conditions, you have set up a temporary camp with bathing facilities. What is the total daily water requirement?
 - 1. 200 gallons
 - 2. 401 gallons
 - 3. 602 gallons
 - 4. 1,200 gallons
- 3-34. What are the two classification of water impurities?
 - 1. Suspended or bacteria
 - 2. Suspended or dissolved
 - 3. Dissolved or silt
 - 4. Dissolved or bacteria

IN ANSWERING QUESTIONS 3-35 THROUGH 3-41, SELECT FROM COLUMN B THE EFFECT OF EACH WATER IMPURITY IN COLUMN A. RESPONSES MAY BE USED MORE THAN ONCE.

A. IMPURITIES

carbonate

- 3-35. Manganese
- 3-36. Magnesium
- 3-37. Calcium bicarbonate
- 3-38. Carbon dioxide
- 3-39. Algae
- 3-40. Calcium chloride
- 3-41. Dissolved oxygen

- B. EFFECTS
- 1. Alkalinity
- 2. Odor
- 3. Brown water
- 4. Corrosion of metal

- 3-42. What data, if any, should you study to determine the variation in reliability that may be expected at a water source?
 - 1. Geological
 - 2. Hydrological
 - 3. Bacteriological
 - 4. None
- 3-43. At what level of government is the title to ground and surface water normally regulated within the United States?
 - 1. Township
 - 2. County
 - 3. State
 - 4. Federal
- 3-44. A temporary water source should not be converted into a permanent water source until after what activity has taken place?
 - 1. A title search for water rights
 - 2. An area search for a source requiring less development
 - An impurities examination by the medical officer
 - 4. An inspection by the public works officer for additional free-flowing springs
- 3-45. The strainer on a suction hose should be placed a total of how many inches under the water level?
 - 1. 6
 - 2. 8
 - 3. 3
 - 4. 4

- water source is the most accessible?
 - 1. Well
 - 2. Spring
 - 3. Subsurface
 - 4. Surface
- 3-47. In a swiftly flowing stream, what type of dam can be constructed to protect an intake screen without impounding the water?
 - 1. Wing only
 - 2. Baffle only
 - 3. Wing or baffle
 - 4. Ripple or wing
- 3-48. The quality of water from a muddy stream can be improved in which of the following ways?
 - 1. By sinking shallow wells
 - 2. By digging intake galleries
 - 3. By filling unneeded trenches
 - 4. By digging outtake galleries
- 3-49. Moisture is held beneath the surface of the earth in what total number of zones?
 - 1. One
 - 2. Two
 - 3. Three
 - 4. Four
- 3-50. Groundwater is the term used to describe underground water in what zone?
 - 1. Filtration
 - 2. Aeration
 - 3. Saturation
 - 4. Soil moisture
- 3-51. In a driven well, the sections of well pipe are delivered in lengths of what size?
 - 1. 5 feet
 - 2. 10 feet
 - 3. 15 feet
 - 4. 20 feet
- 3-52. When developed properly, springs yielding a minimum of how many gallons per minute can be used as a source of field water?
 - 1. 5
 - 2. 10
 - 3. 15
 - 4. 20

- 3-46. For a normal field water supply, what type of 3-53. Refer to figure 9-6. What condition exists that requires the intake screen to be surrounded by coarse gravel?
 - 1. The inlet hose is on a steep slope
 - 2. The turbidity of the water is very high
 - 3. The water source does not cover the screen by at least 4 inches
 - 4. The water contains a large amount of suspended solids
 - 3-54. Little or no consideration is given to the development of a thermal spring as a water source for which, if any, of the following reasons?
 - 1. The high cost involved
 - 2. The unreliability of such a spring
 - 3. The likelihood of heavy mineral concentrations
 - 4. None of the above
 - 3-55. In the development of a spring, an impervious type of permanent structure should be used to protect the water source against
 - 1. water from building drains only
 - 2. surface water drainage only
 - 3. rainwater only
 - 4. water from all sources other than the spring
 - 3-56. There is a total of how many classifications of wells?
 - 1. Five
 - 2. Seven
 - 3. Three
 - 4. Nine
 - 3-57. A well that is dug is usually 3 feet in diameter or more and within what depth range?
 - 1. 10 feet to 30 feet
 - 2. 15 feet to 40 feet
 - 3. 20 feet to 40 feet
 - 4. 25 feet to 50 feet
 - 3-58. A well can normally be bored within what maximum depth without fear of a cave-in?
 - 1. 30 feet
 - 2. 40 feet
 - 3. 50 feet
 - 4. 60 feet

- 3-59. When jetting a well, you turn the jet or frill slowly for what purpose?
 - 1. To ensure the hole is straight
 - 2. To assist in sinking the casing
 - 3. To remove mud and sand
 - 4. To extract muddy water
- 3-60. When a well is driven, the drive points are within what size range?
 - 1. 1 inch to 3 inches
 - 2. 2 1/4 inches to 3 inches
 - 3. 3 inches to 4 inches
 - 4. 1 1/4 inches to 2 inches
- 3-61. When a 2-inch well casing is used with a small self-priming centrifugal pump, water can be lifted from what maximum depth?
 - 1. 24 feet
 - 2. 48 feet
 - 3. 72 feet
 - 4. 96 feet
- 3-62. What is the purpose of a jar test?
 - 1. To aid in the removal of turbidity
 - 2. To indicate what chemical is necessary for coagulation
 - 3. To determine whether the water is turbid
 - 4. To provide sedimentation of the contents in the jar

- 3-63. To guard against subsurface contamination, you should locate rainwater catchment areas at what minimum distance from possible sources of contamination?
 - 1. 25 feet
 - 2. 50 feet
 - 3. 75 feet
 - 4. 100 feet
- 3-64. What minimum treatment is required for collected rainwater that is to be used as a water source?
 - 1. Filtration only
 - 2. Disinfection only
 - 3. Filtration and disinfection
 - 4. Aeration and filtration
- 3-65. A total of how many cubic feet of snow is required to produce 1 cubic foot of water?
 - 1. 5
 - 2. 7
 - 3. 3
 - 4. 9
